EDUCATION

Bachelor of Engineering in Automatic Control and Robotics

Poznan University of Technology

2017 - 2021

PROJECTS

Resolute - Fullstack Issue Tracker | Next.js TypeScript MySQL

The Fullstack Issue Tracker App is built using Next.js, React, TypeScript, Tailwind CSS, Radix UI, Prisma and NextAuth.js for authentication via Google and GitHub providers. This app allows users to efficiently manage issues by adding, editing and organizing them by status and priority. Users can also assign issues to team members, leave comments and view statistics related to the issues.

Anime Radar - Anime Discovery app | React TypeScript

Anime Radar is a web app built with React, TypeScript, Zustand, React Query, React Router and the Jikan API. It allows anime enthusiasts to explore and discover animes based on genres, order type and status, while also providing a convenient search bar for quick lookups. By selecting a title of interest, users can read its description, watch a trailer, learn about the main characters and view suggestions for similar shows.
